

# Beacon

F1 F2 F3

## Wired RT Series

The very low-cost, landline-based alarm and notification system

The Beacon provides an extremely low-cost solution for remote monitoring that is easy to install, dependable and brings the power of the internet to monitoring your remote asset. The Beacon exhibits the industry-leading performance and reliability you expect from an Antx product.

### How the Beacon Works

The Beacon connects to a land-line phone connection and up to 8 monitored conditions. When a monitored condition changes, the Beacon calls the Antx Remote Tracking system via a toll-free number and transmits the unique site identification number and the state of all monitored conditions. The Remote Tracking system records all the information for future reporting and issues the user-specified alarm notifications via voice calls, text-messages and e-mails.

Users can log on to the Antx Tracking system at any time from anywhere using a web-browser and their secure username and password. Once logged in, users can view current data on an interactive map, generate reports of historic data, modify alarm notification lists and configure unique names for any and all conditions monitored.

## Remote Asset Monitoring Made Easy

After the Beacon system records changes and notifies users by phone, text-message or e-mail, they can access and manage their data anywhere at any time using their web-browser.

### Features

- 8 dry-contact channels
- Quick disconnect plugs for easy wiring
- No local programming – just wire up and test
- LEDs for power, phone out and each input
- Integral mounting feet
- Power supply included
- Alarm notification via phone, text-message and/or e-mail
- Web-based interactive maps show your site and its latest conditions
- Web-based text-to-voice messaging – deliver as many details as necessary

- Web-based historic reporting of all alarms and return from alarms
- Alarm notification when unit is inactive
- Alarm notification going into and/or out of alarm conditions
- Connects to any land-line or cellular system with a dial-tone
- Only connects when it needs to call
  - Automatically retries call if unsuccessful
  - No phone charges

# Beacon

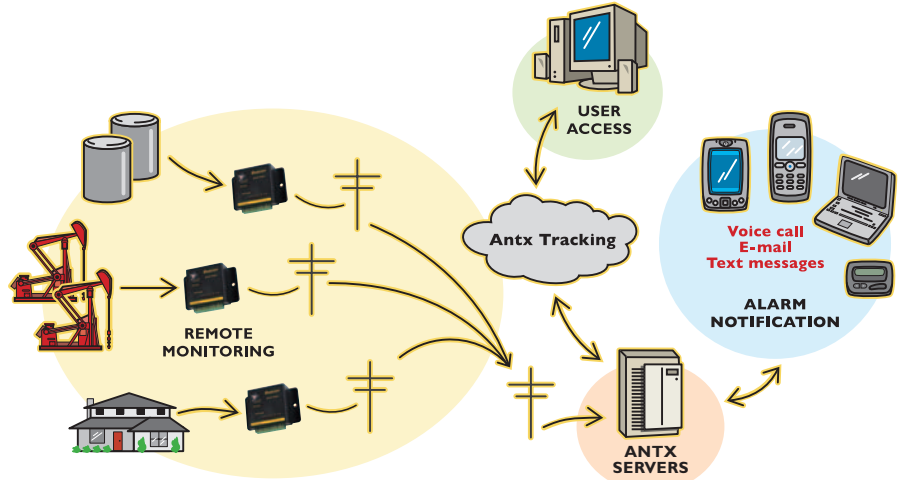

## Wired RT Series

### Uses

- Residential
- Aerobic septic system alarms
- Water leaks
- Too high or low temperature
- Too high humidity
- Pump station alarms
- Intrusion and motion detection
- Commercial and Industrial
- HVAC failures
- Tank levels too high or low
- Motor and pump failures
- Manufacturing machine alarms

### Alarm Notification

- Each alarm event has a user-defined name which allows unique alarms to be delivered for each event.
- Separate events are generated for going into and out of each alarm condition.
- Call up to 5 people from a single event.
- Send unlimited text messages or e-mails for each event including a map of where the site is located.
- Each call provides text-to-voice messages and can include the name of the event, date, time, street address, city, state and the condition of all monitored inputs.

*When a monitored condition changes, the Beacon makes a toll-free to the Antx Tracking System. The Antx Tracking System performs the user-specified alarm notification calls, text-messages and e-mails. From a web-browser, users can then log on to the Antx Tracking system to access and manage their data.*
